Cyclone

Rehearse.
Reshape.
Decide.

A spatial review desk
for physical AI.

CONCEPT ARTWORK / SIMULATION SHOWN

Calm Precision

Brand identity + spatial UX design system

PALETTE / TYPE / CONTROLS / ACCESS / ARTWORK

V1.0 / 10 NOVEMBER 2026

An identity with a still centre.

An open review path around a retained decision. Quiet enough for a daily ritual.

STILLPOINT / RECOMMENDED

Soft geometry. Clear intention.

The C frames a review. The stable square suggests the decision that remains. The mark stays static while the work changes.

CLEAR SPACE

One quarter of the symbol width.

SMALL USE

24 px symbol; 160 px full lockup.

PRIMARY PAIR

Ink on porcelain; porcelain on ink.

EVIDENCE

Keep action glyphs distinct from the brand.

Gate study

Orbit study

Alternative explorations. Stillpoint has the clearest small-size silhouette.

Warm materials. Cool clarity.

Three palettes: Porcelain for flat screens, Ink for XR panels, and an explicit high-contrast mode.

Structure / text	Quiet surface	Material / background	Active path / control
Ink #142B36	Porcelain #F5F1E8	Stone #D8D4CA	Rehearsal #62DCE8

Review required	Increased consequence	Block / refusal	Text / focus on light
Attention #E9B44C	High attention #F29B55	Limit #E982CA	Deep teal #006775

○ Routine △ Review ◇ High attention □ Blocked

39 contrast pairings checked. Text and semantic text pass 4.5:1; control boundaries pass 3:1 on their specified opaque surfaces. Use deep teal, amber and berry for semantic text on light.

Colour never carries status alone. Pair labels with circle, triangle, diamond or locked square and a distinct pattern. Cyan does not mean an action is safe or authorized.

Read the change at a glance.

A soft display face and a legibility-focused interface face. Persistent units and deliberate hierarchy.

MANROPE / DISPLAY / 600-700

See what changes.

Headlines and identity. Avoid thin weights and condensed display treatments inside the task UI.

ATKINSON HYPERLEGIBLE NEXT / UI / 400-700

250 °/s → 180 °/s

Il1 O0 5S 8B

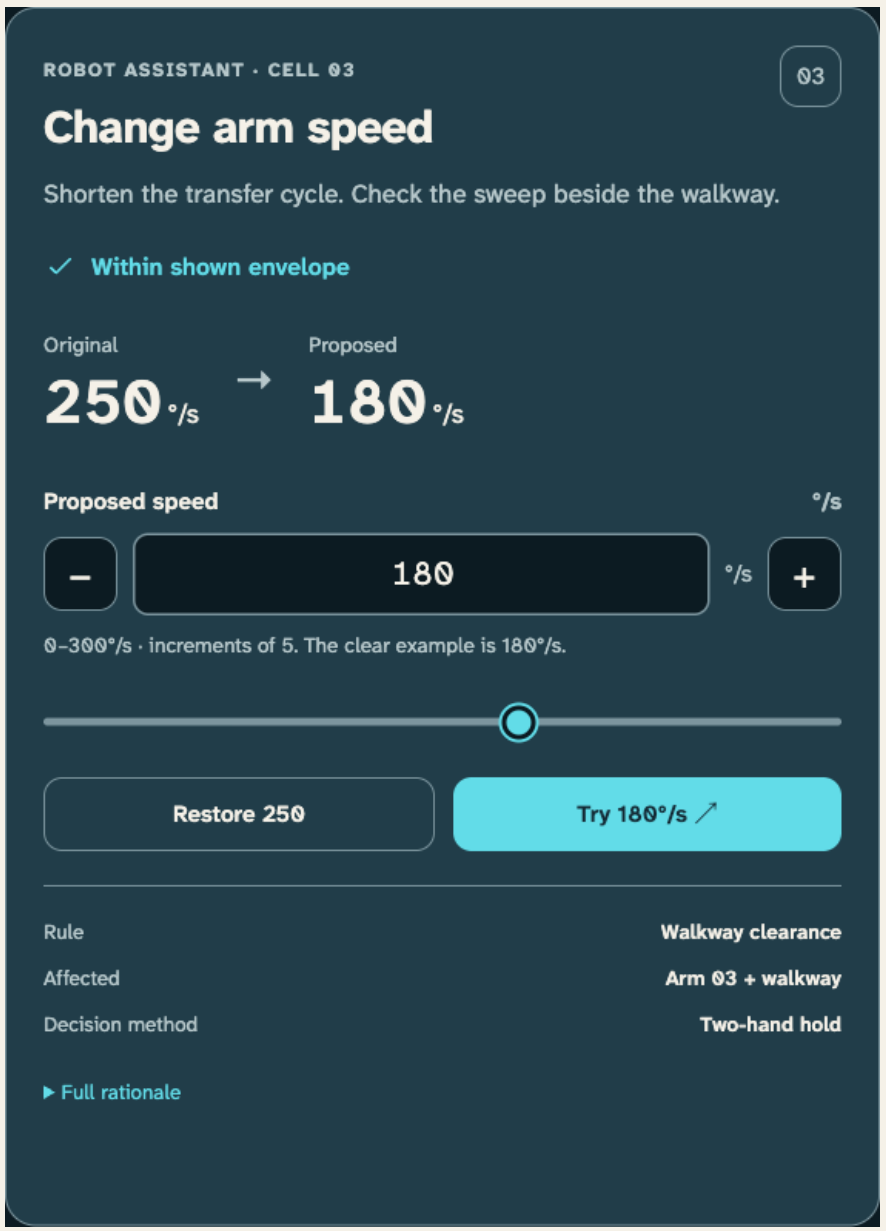

Tabular numerals. Sentence case. Body copy with visible units and labels that persist.

Role	Web size / line height	XR starting em size
Panel title	32 px / 1.2	1.5 cm
Decision value	40 px / 1.15	1.8 cm
Body / instruction	18 px / 1.5	0.9 cm / 1.35
Label / supporting	16 px / 14 px	1.0 cm / 0.75 cm

At 55 cm, a 0.9 cm em is about 0.94°. This is not measured glyph height. Verify x-height and 125% text scaling on device. Font files and SIL Open Font Licences are included.

Controls with clear consequences.

A working browser specimen makes the interaction states concrete. It sends no real decision.

The change comes first

Asset, proposed action, reason and consequence. Original and proposed values share the same unit and precision.

Edit without ambiguity

Persistent label, explicit bounds and step. Numeric entry and named plus/minus controls complement the dial.

Scrub is inspection

Moving the timeline only changes a preview. A value edit cancels an active commitment and clears the old practice decision.

A hold has an exit

1.5 seconds with visible progress. Release, pointer exit, focus loss or interruption cancels. No automatic restart.

Keep the evidence separate

The prototype states rehearsal, decision and verification independently. A recorded practice decision does not become a verified signature.

Use the interactive studio to try keyboard input, invalid values, themes and cancellation. The screenshot is a design specimen, not a headset capture.

Bounded choices. Visible recovery.

A preference changes comfort. A delegation changes authority. Give them different controls and copy.

BOUNDED FORM / PROPOSED FEATURE

Delegate a small change

One asset. A narrow range. An expiry you can see.

Asset

Conveyor 01

Agent

Conveyor assistant

Maximum increase (%)

5

Expires

End of this session

Lower bound: 0%. Routine, single-approval proposals only.

Save example | Revoke example

This preview creates no live delegation.

Selection

Radio groups for one choice. Switches for immediate preferences. A visible group label and an explicit selected state.

Validation

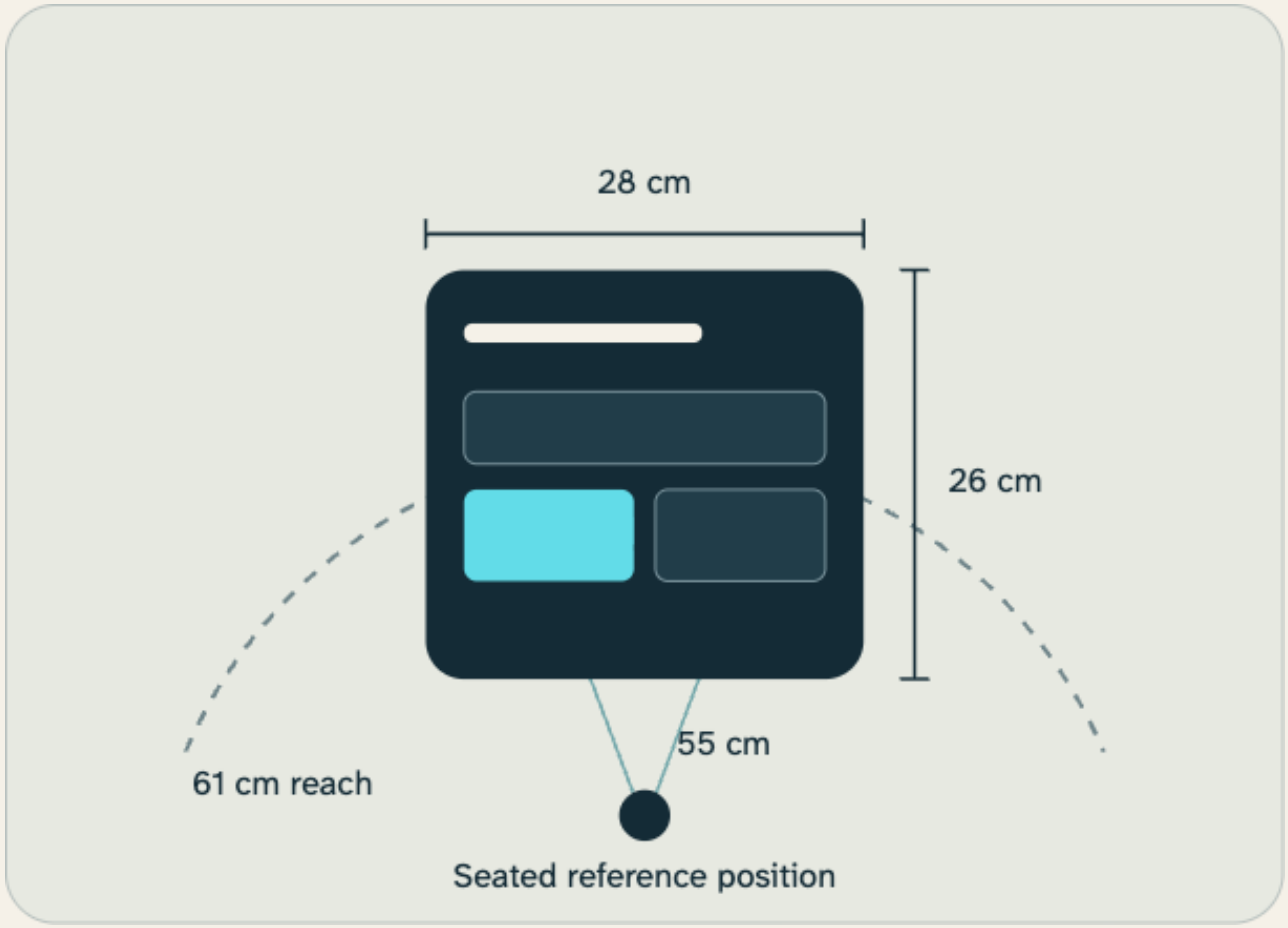

Label, unit, bounds and help stay visible. Preserve the entered value. Associate the error and focus the first invalid field.

Delegation

Name the agent, asset, allowed risk, lower/upper limits and expiry. Make revoke explicit. This remains a proposed feature.

More ways in. The same authority.

Input alternatives preserve the policy requirement. Comfort settings never weaken a decision gate.

Readable geometry

28 × 26 cm panel at about 55 cm. Targets 3.5 cm preferred, 3.2 cm minimum, with 0.8 cm gaps.

Fit the actual room

Check full board fit, every dynamic control and the seated head position. Reposition or use the plinth when needed.

Comfort persists

Opaque text backing, 125% reflow, captions on, and reduced motion with explicit progress.

Hands

Grab, twist, place and deliberately hold. Controllers stay optional.

Gaze + pinch

Look to target; pinch to act. Dwell reveals details, never approves.

One hand

Preferred hand plus sustained gaze. Interruption stops progress.

Say exactly what is established.

Rehearsal clearance, policy permission and an observed execution result are separate facts.

State	Visible language	What it means
Waiting	Held for review	The request remains unresolved.
Model result	Within rehearsal envelope	A model result; not a real-world safety claim.
Decision submitted	Decision sent	A request was sent; no completed execution claim.
Proof pending	Checking decision record	Hold execution eligibility until the checks succeed.
Binding verified	Signature checked	Exact binding, coverage and trust checks passed.
Proof failed	Record could not be verified	Show reason and recovery; no verified execution signal.
Demo record	Demo signature	Local demo signing; no production trust anchor.
Observed result	Execution confirmed	Only an actual result/receipt establishes execution.

Keep model version, scene, original/amended action and reviewed trajectory with the receipt. Historical replay must preserve the original evidence. An expired drill is not a successful catch.

Make the core loop feel finished.

Apply the shared system in stages, with device evidence before competition capture.

01 Repair settings geometry

Constrain prefab minimum sizes; inspect computed bounds. Do this before visual styling.

02 Adopt semantic roles

Map palette, type and state language into existing renderers. Preserve the capability register.

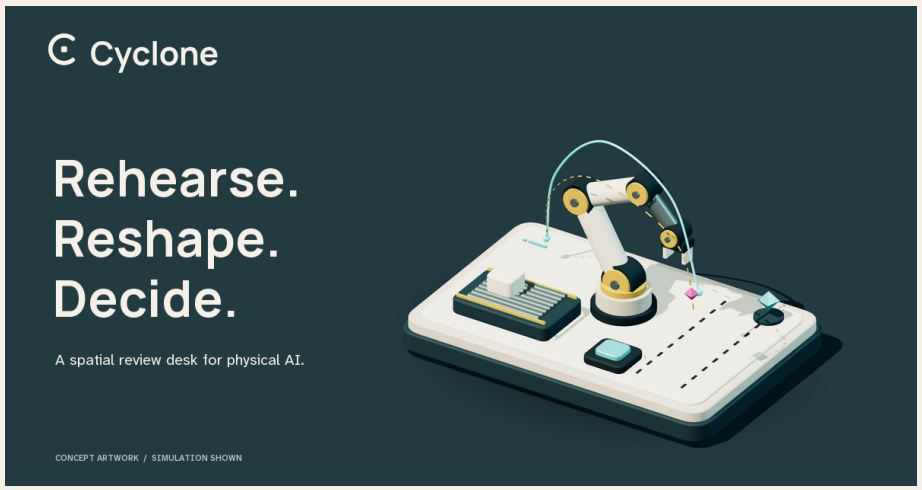

03 Clarify the decision card

Asset, change, consequence, requirement, next gesture and full rationale.

04 Verify input and evidence

Hands, one hand, gaze path, cancellation, font scaling, rooms, frame time and proof gating.

Design proposal only. Application behaviour and styling have not been changed by this kit.

Included in the kit

- Interactive offline design studio
- Outlined SVG logos + PNG exports
- Two finished cover sizes + clean artwork
- Colour, type, spacing and XR tokens
- 39-pair contrast report
- Font files + licence notices
- Editable original 3D scene
- Detailed implementation guide
